

No extra lights required

In the event of a power failure, a Mini-Inverter can power most existing lighting to illuminate the path of egress according to code. One Mini-Inverter can provide emergency power for multiple lighting units using existing wiring, with a mounting distance of up to 1000 ft. When the aesthetics of a space must be preserved, a Mini-Inverter is an ideal solution to power emergency lighting.

Mini-Inverters allow existing lighting to function as emergency lighting
